

STREAMLINING IT PROCUREMENT: AUTOMATING STANDARD LAPTOP ORDERS WITH FLOW DESIGNER

PHASE 6 – PROJECT TESTING

6.1 Introduction

The project testing phase verifies whether the Standard Laptop procurement workflow operates as expected in ServiceNow. Testing focuses on request submission, approval, Flow Designer automation, Catalog Task creation and Hardware team assignment.

6.2 Testing Objectives

- Verify that the Standard Laptop request can be submitted successfully.
- Verify that the request proceeds through the required approval stage.
- Verify that Flow Designer executes after approval.
- Verify that a Catalog Task is created for the approved request.
- Verify that the Catalog Task is assigned to the Hardware team.
- Verify that the complete procurement workflow operates consistently.

6.3 Test Cases

Test Case	Test Scenario	Expected Result	Result
TC01	Submit a Standard Laptop request through the Service Catalog.	The request is submitted and a Requested Item is created.	Passed
TC02	Process the submitted request through the approval stage.	The request reaches the required approval process.	Passed
TC03	Approve the Standard Laptop request.	The approved request allows the automated workflow to continue.	Passed
TC04	Verify Flow Designer execution after approval.	The configured flow executes for the approved request.	Passed
TC05	Verify Catalog Task creation.	A Catalog Task is automatically created for the request.	Passed
TC06	Verify Hardware team assignment.	The Catalog Task is assigned to the Hardware team.	Passed
TC07	Verify the complete request-to-fulfillment process.	The workflow completes the defined stages consistently.	Passed

6.4 Testing Process

Testing is performed by following the Standard Laptop procurement workflow from the initial request through approval and automated fulfillment. Each stage is verified to ensure that the required action occurs correctly and that the next stage is triggered as expected. The testing checks request submission, approval, Flow Designer execution, Catalog Task creation and Hardware team assignment.

6.5 Expected Testing Outcome

The expected testing outcome is a successfully functioning procurement workflow in which a Standard Laptop request is submitted through the Service Catalog, processed through the required approval stage, and automatically converted into a Catalog Task assigned to the Hardware team. The workflow should complete each defined stage in the correct sequence.

6.6 Testing Summary

The testing phase validates the major components of the automated Standard Laptop procurement process. Successful verification of request submission, approval, Flow Designer execution, Catalog Task creation and Hardware team assignment confirms that the implemented workflow follows the designed process.
